

Behavioral Based Safety Risk Perception Workshop

Everyone perceives and accepts risk in a different way. The dynamics of how we make decisions is complex and our ability to perceive danger is one of the first steps to prevent injuries. What is the right level of risk perception and better yet, how do you teach people to recognize and respect hazards?

This workshop will help clients develop a successful level of risk tolerance. The goal is to teach leaders how to make their biggest impact on safety performance with risk perception tools and techniques.

RISK OR REWARD: Why do we take chances?

- We overestimate our ability
- The task is too familiar
- We don't believe the consequences would be bad
- Voluntary actions feel safer. We are in control
- We have never seen the negative impact
- We believe the "cost" is not that high
- We believe the equipment will not fail
- We have confidence in the protection and rescue
- We gain perceived value from the activity
- People we respect accept the risk
