

Materials Management for Maintenance

SCMEP partners with the Marshall Institute to bring you Materials Management for Maintenance.

Maintenance organizations need the right material, in the proper quantity, at the right time. If these basic conditions are not met, your maintenance effort will be ineffective. In this era of downsized industrial operations, careless material accountability is not an option. Companies typically have several hundred to several million dollars-worth of parts in a maintenance storeroom, “just in case.” This is clearly a very costly practice.

The availability of better data and refined control measures will help. In addition, maintenance and material control personnel have a joint responsibility and plant profitability. These days, they have no choice but to work together. Making maintenance resources more productive requires effective planning methods, organizational structures and techniques for optimum management and control of maintenance inventory.

Here’s What You Can Look Forward To...

- Better Control of Parts & Materials
- Optimum Inventory
- Reduced Stock-out
- Increased Storeroom Efficiency & Effectiveness
- >95% Service Level
- Effective Asset Management
- Turning Your Storeroom into a Profit Center

Learning Objectives

- Express high level knowledge of the difference between typical and World Class Inventory Management
- Demonstrate the importance of accurate Equipment Bill of Materials
- Explain tactical processes required for an efficient and effective work control program to be applied at your site
- Demonstrate your knowledge of optimizing the overall MRO Stores operation in support of Maintenance Excellence
- Discuss the roles and responsibilities of MRO storeroom operations in support of reliability
- Recognize benchmark metrics you can use to measure your operations and drive the right behaviors
- Develop an action plan for improvement using the 9 Phase Implementation Process methodology

Who Should Attend This Seminar?

- **Storeroom Personnel (Clerks/Supervisors/Managers)**
- **Maintenance Planners & Schedulers**
- **Maintenance Supervisors**
- **Production Supervisors**
- **Reliability Engineers**
- **Accounting Personnel**
- **Maintenance Managers**
- **Directors of Maintenance**
- **Purchasing Managers**
- **Production Planners**
