

Leader Standard Work

Through implementing Lean, we have changed the way our workers are doing things – but we haven't changed how our managers do things. As a result, we are struggling with sustaining our Lean gains. This class will help you move from working on your Lean production system to working on your Lean management system.

We'll discuss the key components of Leader Standard Work and review examples of each:

- Visual tools
- Process focus vs results focus
- Gemba walks
- Kata
- LSW Structure

When you leave the class, you should have a draft of your LSW to begin using the next day.
